No. is the number of results predicted by chance to have a sore greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A Geneseq 101002:•

```
The specification describes a fish serine proteinase. The proteinases are useful as medicaments, for treating and preventing a disease in a human oct an animal such as pain, acute inflammation, chronic thumacion, arthritis, inflammed joints, burstis, oscorathritis, resonated arthritis, inflammed joints, burstis, oscorathritis, chemanical arthritis, juvenila rheumacoid arthritis, septic arthritis, peoriasis, acres, factal seborrhaic cerams, esteram of the hands, comments, sense, factal seborrhaic cerams, factal seborrasic cerams, offers of the comments, or neck, foreskin infections, athlete's foot, fistulae infections, infected topical ulcers, navel infections, hemorrhoids, wounds from burns, fungal infections and immunological and infections, munuclasses. They are also useful for removing dead or peeling skin from otherwise healthy skin, and for treating or preventing a skin from otherwise healthy skin, and for treating or preventing a grant from otherwise healthy skin, and considered binding is involved, parasite or a protozoan or a receptor mediated binding is involved.
                                                                                                                                                                                       Fish serine proteinase, useful as a cosmetic, medicament for treating eczema, psoriasis, arthritis, and in the manufacture of the medicament for treating, preventing pathogenic diseases involving receptor mediated binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pig; bone; calcium; resorption inhibition; formation; osteoporosis; Paget's disease; fracture repair; bone defect; osteopetrosis; metastasis; osteoblast; osteoclast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  85.0%; Score 85; DB 22; Length 20

                                                                                                                                                                                                                                                                                                                                                                                                                    The specification describes a fish serine proteinase. The proteinases are useful as medicaments, for treating and preventing and steese in a human or an animal such as pain, acute inflammation, chronic thuman or an animal such as pain, acute inflammation, chronic creaming and preventing a disease in a inflammation, arthritis, diventies, decoarthritis, septic arthritis, cheuratis, osteoarthritis, cheuratis, osteoarthritis, cheuratis, osteoarthritis, cheuratis, septic arthritis, cheuratis, such eccama, factal seborrheic cerama, factal seborrheic cerama of the hands, comportasis, acres, factal seborrheic ceram, excama of the hands, confected topical ulcers, navel infections, athlete's foot, fisulae infections, chifected topical ulcers, navel infections, and infections, wounds from burns, fingal infections and immunological and infections, wounds from burns, fungal infections and immunological and infections. They are also useful for removing dead or pealing skin from otherwise healthy skin, and for treating or preventing a skin from an parallely skin, and for treating or preventing a parasite or a protozoan or a receptor mediated binding is involved.

The present sequence represents the amino terminal of cod trypsin B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fish; serine proteinse; pain; acute inflammation; chronic inflammation; arthritis; inflamed joint; bursitis; osteoarthritis; septic arthritis; rheumatoid arthritis; furonile rheumatoid arthritis; ifbromyalgia; systemic lugus erythematosus; phisbitis; tendinitis; rash; psoriasis; acno; eczema; facial seborrheic eczema; foreskin infection; athletes foot; figulae infection; ulcer; navel infection; wrinkle; scar; kelloid; boil; wart; allergic itch; hemorrhoid; wound, fungal infection; autoimmune disease.

The present sequence is bowine chymotrypsinogen. It was included in a review of sequence homologies of several planaminogen activators. It amminogen is the principal seriem protease zymogen in the paraminogen is the principal seriem protease zymogen in the centracellular fluids of vertebrates. Its active form, plasmin, is centracellular fluids of vertebrates. Its active form, plasmin, is confident in periocillar proteolysis associated with a wide range of physiological and pathological processes. Plasminogen expression is regulated by plasminogen extivation processes. Plasminogen expension is plasminogen to spontaneously convert it to plasmin. The sequence to homology analysis has identified a six amino acid peptide involved in convert plasminogen activation. This peptide is particularly useful when inserted between maino acid residues 644 and 645 of full length human contractors have been made based upon the plasminogen. Novel plasminogen activation/recognition site of plasminogen binding proteins. The polypeptides are useful in preparing thrombolytic agents for treating blood clotting disorders such as heart attack.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polyperfortde with plasminogen activator activity useful as thrombolytic agent for treating blood toor disorders e.g. heart attack. comprises 10 agent acts for tecognition of activation of

                                                                                                                     AMM02588 is the N-terminal portion of a factor derived from pig pancreatic tissue. The factor was designated by. Px inhibits the pancreatic tissue. The factor was designated by. Px inhibits the hence respection and stimulates the action of osteoblasts, hence Px inhibits bone resorption and stimulates bone formation. The we factor also stimulates the proliferation of human MG-63 osteobastroma cells (osteoblast-like cells). The factor is useful for treating bone loss, e.g. due to osteoporosis or Paget's disease. The factor may also be used to hasten bone fracture repair. Antibodies osteoblastic metastasis
                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
            New isolated pancreatic-derived factor - which inhibits bone resorption and increases bone formation, used to develop prods. for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The genetically engineered prod. can eliminate the dependency on human pancreas Supplies for the clastase, and avoids articlody formation and possibility of anaphylaxis using porctine alastase.
                                                                                                                                                                                                                                                                                                                                                                                                                    ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New genetically engineered human pancreatic elastase - obtd.
using hosts modified DNA coding for enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Takiguchi Y, Tani T, Kawashima I, Eurukawa H, Ohmine T;

transplantation rejection reactions of memorial and analysis of transplantation rejection reactions for transplantation of immune cells or other issues. The method comprises treating a source of immune cells with a hydrolase or hydrolase mixture and administering the treated immune cells or or erapicing an article as especially has a cone of CD4. CD5. CD28 ICM*1 (CD54). CD124. In integrin, CD154, disabling or inceptin, CD154, disabling or inceptin, CD154, disabling or inceptin, CD154. CD160 and CD80 in control or removing, destroying, inactivating or disabling TCR. The methods are useful for preventing graft versus host consequence by the method are useful for preventing graft versus host inception which are involved in triggering the immune reactions involved in the diseases, the methods are used for treating or preventing included the cell vitual adhesion syndrome comprising inflammation, that converses, autoimmune disease, transplantation rejection shock, treattions or microbial infections. The present sequence represents the involved in trivanting and the method of the

            The present invention relates to a method for ameliorating extra-corporeally denot issue or denor source of immune cells with a rejection ameliorating effective amount of a hydrolase enzyme. The method is useful for ameliorating, treating or preventing immune rejection reactions such as graft versus host diseases, organ or tissue microbial infection, fundume disorder, cyptic fibrosis, ordan or tissue microbial infection, fumune disorder, cyptic fibrosis, ofnionic obstructive pulmonary disease (ODD), attheroselerosis, cancer, astima, septic shock, toxic shock syndrome, conjunctivitis, reperfusion injury of bovine serine multifunctional hydrolase, used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    proteins, called pancreatic cancer antigens, given in AAB54068 to AAB54466. The human pancreatic cancer antigens have cytostatic, neuroprotective, nootropic, immunomodulatory, relaxant, concreceptive, gynaecological, cardant and antiinflammatory activities, and can be used in gene therapy. The polymucleotide and proteins can be used for

       preventing, treating, or ammittantaling a medical counting of the diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the subject. Binding partners to the proteins and the activity of the subject. Binding partners to the pancreatic cancer antigens can be selected, cancer an end of a partners or a partners of the antigens can be servened for. The partners can be servened for. The action probes that can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping. Inhage and diagnostic methods. The proteins can be used to generate antibodies and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and traspet the polypepticles, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune system, muscular, correcting can be used to diagnostic and therapeutic methods. The proteins can be used to diagnostic and therapeutic methods. The proteins can be used to diagnostic and therapeutic methods. The proteins can be used to diagnostic and therapeutic methods. The proteins can be used to diagnostic and therapeutic methods and the used to prevent neural, immune system, muscular, professional disorders. Action of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to human tumour antigen-derived gene 15 (TADG-15) protechin and coloning sequence (see AAR13601 and AAR39500).

TADG-15 is an extracellular serine protease. It was found that TADG-15 is over-expressed in ovarian tumours. TADG-15 protein or its fragments of 9-20 residues that lack TADG-15 protease activity are useful for vaccinating an individual against TADG-15, having, suspected of having or at risk of getting cancer. Furthernore, the TADG-15 gene can be used as a diagnostic or theirspectic target in cancer. The present sequence was used in a sequence homology alignment with the catalytic domain of TADG-15.
                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel extracellular serine protesse, termed tumor anticen-derived gene the protection of cancer, overexpressed in carcinomas and DNA encoding it, for dispnosis, treatment, prevention of cancer, particularly breast.

The present invention relates to the isolation of novel human proceases, and the nucleic acide encoding them. The sequences of proceases, and the nucleic acide encoding them. The sequences of acides are cancers (e.g. breat, only lump), immune-related diseases and disorders and cancers (e.g. inflammatory diseases and sother), cardiovaed diseases and disorders (e.g. testenosis and coronary thrombosis), brain or neuronal-associated (e.g. restenosis and coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. thematoid arthritis and psoriasis), central or paripheral nervous system diseases, migrafines, pain, sexual dysfunction, paripheral nervous system diseases, migrafines, pain, sexual dysfunction, propertension, psychotic disorders, cognition disorders, hypotension, hypertension, psychotic disorders, neurological disorders, profession, infections caused by human immundeficiency virus (infections such as coular disease) (e.g. qiaucoma) and macular infections such as coular diseases (e.g. qiaucoma) and macular infections and sexual disease (e.g. qiaucoma) and macular infections and as coular diseases (e.g. qiaucoma) and macular infections and sexual diseases (e.g. qiaucoma) and macular infections and diseases (e.g. qiaucoma) and macular infections and diseases (e.g. qiaucoma) and macular infections and associated and polyces.

The invention relates to novel serine proteases designated BSSP5 (AABIT70-B1111), and to nucleic acids encoding them (AAA61731-A6134). The invention also relates to vectors and transformants comprising BSSP5 nucleic acids, transgenic animals in which the expression level of BSSP5 can be varied, and an meSSP5 incocket mouse. The invention additionally encompasses anti-BSSP5 antibodies and methods of production of guide antibodies, methods of BSSP5 proteins of BSSP5 proteins of Expension and additionally can be proteins or fragments as diagnostic markers for certain particular comprising measuring BSSP5 concentration in the blood or using a parcreatitis comprising measuring BSSP5 concentration in the blood or curine, and a pancreatitis diagnostic agent containing an anti-BSSP5 carticipody is also disclosed. Nucleotides encoding BSSP5 were initially isolated in a human brain conserved regions of serine proteases. The BSSP5 serine proteases and nucleotides encoding them are useful in detecting homologues, metants and polymorphic variants in biological samples (e.g., blood, unine, brain, profester gland, placenta, testis, pancreas and spiken) as diagnostic markers for conditions such as CAlzhafmer's disease, epilepsy, cancer, inflammation, infertility.

Company of the professes and species metants murine BSSP5 chancertis and proteatic hypertrophy. Sequence ABB11711 represents murine BSSP5 chancer.
                      BSSP5; serine protease; human; hBSSP5; mouse; mBSSP5; brain; dagagnostic marker, antibody; transgenic animal; Alzheimer's disease; epilepsy; cancer; inflammation; infertility; pancreatitis; prostatic hypertrophy.
                                                                                                                                                                                                                                                                                                                                                               Serine proteases BSSP5, useful in detecting homologs, mutants and dyAmorphic variates as markers for diagnosis of e.g. Alzheimer's disease, epilepsy, cancer and inflammation, using blood, urine, pancreas or other tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ..

The product is useful in rejuvenating the elasticity of the arterial wall, and improving unusual serum lipid levels and lipoprotein metabolism.

| Paren No. 6020183
| GREEAL INFORMATION:
| APPLICANT: LOCKRORE, Shenna M. APPLICANT: CHONG, Pele
| APPLICANT: CHONG, Pele
| APPLICANT: CHONG, Pele
| APPLICANT: CHONG, Pele
| TILLE OF INVENTION: Analog of Haemophilus Hin47 Protein with
| TITLE OF INVENTION: Reduced Protease Activity NUMBER OF SEQUENCES: 23
| CORRESPONDENCE ADDRESS: 51m & MCBRITOP
